

ABSTRACT OF THE DISCLOSURE

A method for reproducing an optical disc having a plurality of titles. The method is capable of, when an all disc repeat play operation or an all disc successive play operation is performed with respect to a plurality of optical discs loaded in a multi-disc changer, or when an instant play operation is performed in a general optical disc player, omitting a still mode operation of outputting and displaying a title menu picture regarding titles recorded on each disc, and selecting and reproducing any one of the titles with reference to respective playback times of the titles, thereby efficiently preventing the all disc repeat play operation, all disc successive play operation or instant play operation from being interrupted due to the display of the menu picture.
